Our 14-Day Proof-of-Concept (POC)

Do you know if your defenses are good enough?

Tidal Cyber Enterprise Edition platform can help you map the security tools you have against MITRE ATT&CK, our own threat and defensive intelligence, other open and closed source CTI, and help you get the most out of where you've already invested to save your teams time, money, and stress in pursuing the best protection.

Let us show you in a detailed 14-day proof-of-concept (POC). This includes:

- A quick kick-off call with our Customer Experience team to:
    - Immediately set you up with a pre-built representative defensive stack
    - Establish your pre-built threat bundles
        - General threats (e.g. Ransomware and Extortion Threats)
        - At least one Threat of the Day (e.g. Black Cat)
        - One sector-specific bundle (e.g. Financial and Banking Global Threats)
    - Generate a coverage map so you can see how the defenses stack against the threats
    - Show you example confidence score and recommendations for tuning defenses

- We keep the communication process smooth:
    - Occasional emails with tips if we add new critical content during your POC
    - One 30-minute POC check-in call midway through with Q&A for your team
    - One End Assessment to answer questions and plan next steps

While this is a quick POC, it is still an in-depth POC that shows you the value you can gain from our platform. Take two weeks with us, let us do the heavy lifting, and learn how to apply this to your own environment. Reach out to your account representative or email tryenterprise@tidalcyber.com to get started.
